ADVERANT NEXUS · HEALTHCARE PACK

Purpose and access logged on every record.

The healthcare pack helps clinical and admin teams with referrals, letters and records. Every time anyone or any AI opens a patient's record, the purpose is checked and logged. Administrators run the system without ever seeing a patient's files.

A referral summary. Every line cites the letter, result or medicine list it came from. Sample data.

Less paper chasing. More time with patients.

Every access has a reason

Each time a person or an AI agent opens a record, the purpose is checked against what they are allowed to do, and the access is logged.

Summaries that cite the notes

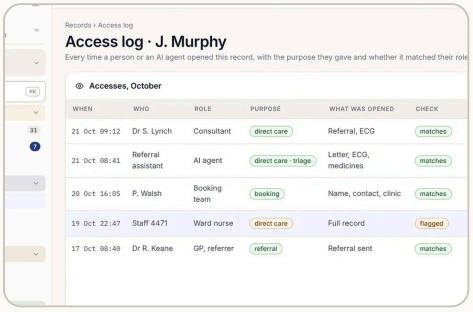

Referral summaries and letters link each line to the note, result or letter it came from, so clinicians can check in seconds.

Clinicians make the calls

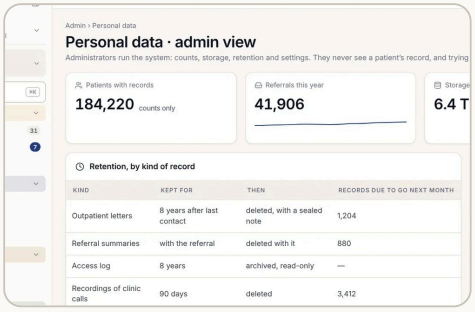

Suggestions are marked as decision support. Priorities, diagnoses and treatment are set by a named clinician.

Screens for each desk

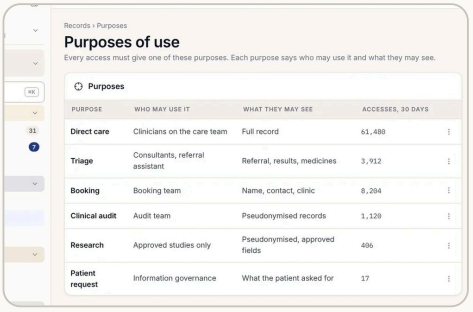

Sample screens with a made-up hospital

The access log. Who opened the record, with what purpose, and the one access that does not fit.

The admin view. Counts, storage and retention; an attempt to open a record is refused.

Purposes. Each purpose, who may use it and what each role may see.

Who uses it

One pack, with a view for each role

Consultant

Referrals waiting on a priority, with a sourced summary and what is missing.

Booking team

Who needs an appointment and when, without the clinical detail.

GP and referrer

Whether the referral was accepted, what was asked for, and the outcome letter.

Information governance

Who opened which record, for what purpose, and any access that looks wrong.

System administrator

Health, settings and users. Never a patient's record.

How it works: from referral to a booked appointment.

01

Receive

Referrals arrive from GPs and other services. The pack files each one and records the purpose of care.

02

Summarise and check

The letter, results and medicines are read. A sourced summary is drafted and anything missing is flagged.

03

Clinician decides

A consultant reviews the summary and sets the priority. Suggestions from local protocols are shown as support only.

04

Book and seal

The booking team books. The referrer and the patient are told. The decision and every access are sealed.

WHAT IS SEALED

Each decision, sealed with every access.

When a clinician decides, the decision, the summary they read, its sources and every access along the way are sealed together.

Anyone can check a sealed decision offline with a free verifier, without an account with us.

THE RULES YOU ANSWER TO

- **GDPR** · Regulation (EU) 2016/679, Art. 9
  Health data is a special category, with strict conditions on its use.
- **European Health Data Space** · Regulation (EU) 2025/327
  Patients' access to their records, health record systems and secondary use of health data.
- **Medical devices** · Regulation (EU) 2017/745 (MDR)
  Software meant for a medical purpose, including AI, can be a medical device.
- **In vitro diagnostics** · Regulation (EU) 2017/746 (IVDR)
  Rules for diagnostic devices and the software that runs them.
- **EU AI Act** · Regulation (EU) 2024/1689, Annex I
  AI in medical devices is high-risk. Those duties apply from 2 August 2028.
- **NIS2** · Directive (EU) 2022/2555
  Security and incident reporting for healthcare providers in scope.

Runs where health data must stay.

Run the pack in an in-country cloud or in your own data centres. Remote clinics can work offline.

WHY ADVERANT

Nexus is one platform for every industry: the healthcare pack adds the words, workflows and rules, and the platform brings permissions, AI agents with limits, a budget for every model and a sealed record of every decision. Nine patent applications are pending in Ireland on how AI agents get authority, stay within it and have what they do recorded.

Don Scott, Founder and CEO, architect of Nexus. **Donal Hanafin**, Co-founder, two decades building products for regulated financial services.

HOW TO START

Pick one service and one job, such as triaging outpatient referrals. We connect your systems, switch on the pack in the country, and you see it working on your own referrals. We can start on a copy of past records, so nothing live is touched until you are happy.
